

Final GIS

1. In Arc Map, by default, the Standard toolbars are turned off.
A. True
B. False
2. Nodes are at the end of every line.
A. True
B. False
3. A precise measurement may be inaccurate.
A. True
B. False
2. Accuracy applied only to attribute data whereas precision applies to both attribute and geographic data.
A. True
B. False
5. Visualization is best for detailed analysis.
A. True
B. False
6. Raster formats can always tell what exists at given location.
A. True
B. False

7. High accuracy and high precision are both expensive to acquire.

A. True

B. False

8. Density is the number of items per cell.

A. True

B. False

9. In general, topology effects vector data.

A. True

B. False

10. Spatial data describes the ----- of geographic features.

A. Metadata

B. Characteristics

C. Location

D. All the answers are correct.

11. Layers added from ArcGIS online are placed into groups by default.

A. True

B. False

12. Fractal analysis appeared in which stage of acceptance.

A. 3

B. 4

C. 1 → Rejecting

D. 2

13. Raster formats have a relatively simple data structure.

A. True

B. False

14. Measure of attribute accuracy vary depending upon the level of measurement of the attribute.

A. True

B. False

15. In Arc map, the identity dialog box shows the attribute data, or information for the feature you clicked.

A. True

B. False

16. Aerial photography is considered active remote sensing.

A. True

B. False
